## Implementation · Mounting Method

### Automatic mounting

- SFS / SFCS series is designed to have a large flat area in the center of the top surface to serve as a pick up point for automated vacuum pick and place equipment.
- An excessively low bottom dead point of the suction nozzle imposes great force on the core of SFS series during mounting, causing cracked core. So during mounting, take enough care.

### Soldering temperature

#### (1) Reflow soldering

- Below and right figure show the conditions of reflow soldering. Please verify the temperature of the ALM pin and +Vout pin satisfy to reflow condition.
- Improper reflow condition may degrade the reliability of the internal components.
- While soldering, having vibration or impact on the unit should be avoided, because of solder melting.

A	1.0 - 5.0°C / s
A'	Ty1 : 160 ± 10°C Ty2 : 180 ± 10°C Ty1 - Ty2 : 120s max
B	1.0 - 5.0°C / s

C	1.0 - 5.0°C / s

**Implementation · Mounting Method**

(2) Flow soldering

■ 260°C, less than 15 seconds.

(3) Soldering iron

■ 340°C to 360°C, less than 5 seconds.

**Mounting method**

■ Avoid placing pattern layout in hatched area in right figure to insulate between pattern and power supply.

**Stress to the product**

■ SFS/SFCS series transformer core and choke coil core are attached by glue, and there is a cover over the core, which is attached by a clasp.

There is a possibility that the core will be removed and power supply will be damaged when it took stress by the fall or some kind of stress.

**Derating**

**Ambient temperature derating curve**

■ It is necessary to note thermal fatigue life by power cycle. Please reduce the temperature fluctuation range as much as possible when the up and down of temperature are frequently generated.

■ In case of forced air, ventilation must keep the temperature of point A and B below the temperatures shown in Instruction Manual 8.
